we detect to protect

DETECTING DRUGS, EXPLOSIVES AND DANGEROUS SUBSTANCES

Active protection

Modern society faces an increasing variety of threats to both community and personal security, and without effective methods of detection it is simply not possible to provide adequate protection. To achieve this we need systems that recognize the specific nature and scale of these threats.

Established in 1995, Securetec Detektions-Systeme AG develops leading edge technology to facilitate the detection of drugs, explosives and dangerous substances.

We detect to protect – Securetec is proud to play a part in making today's world a safer one.

Clinical standards for quality assurance

Securetec systems reliably detect drugs and dangerous substances from even the smallest samples and lowest concentrations. The identification process is based on specific antibody reactions. The very specific nature of these reactions ensures the highest reliability, proven by thousands of samples taken in real-life circumstances.

Depending on the application and its specific requirements, our systems can detect trace substances in sweat, saliva or urine as well as air-borne substances, by pumping the air out of containers or flasks through filters.

Our in-house R&D facilities and production processes meet the highest international standards and our products are approved for use by medical authorities and clinics worldwide. Having direct control of R&D and production allows us to respond quickly to new and emerging threats, specific customer requirements and legal regulations.

Close cooperation with our foreign subsidiaries and international partners enables us to pro-actively adapt to changes in technology, applications and security.

Securetec has made substantial investments in R&D, and will continue to do so. We focus not only on the ongoing improvement of our existing solutions, but also the development of innovative rapid tests for explosives and viral diseases. We provide better protection for individuals and communities.

Internationally Renowned Specialist

Securetec detection systems are successfully employed across a multitude of applications. In-house development and production facilities ensure that our products meet the highest clinical standards.

Matters of security demand sensitivity and confidentiality – by close cooperation with our customers we can identify their specific needs and

develop solutions for effective day-to-day use.

One of the world's leading developers of detection systems, Securetec provides solutions for traffic safety, customs and drug enforcement authorities across the globe. Our systems guarantee fast, reliable detection of a diverse range of drugs and dangerous substances.

For corporations, educational institutions and prevention/rehabilitation organizations, we offer consultancy service. With our extensive experience of the rapid identification of drugs and dangerous substances, we can develop and implement security concepts, solutions and training tailored to an organization's specific requirements.

Rapid drug tests for

- Cannabis
- Amphetamines
- Ecstasy
- Methamphetamines
- Cocaine
- Opiates
- Benzodiazepines

SUPPORTING TRAFFIC SAFETY

Drug abuse on the road

Driving under the influence of drugs represents a major threat to road safety. Modern recreational drugs in particular have brought about a dramatic increase in drug-related accidents – resulting in thousands of serious injuries and deaths.

Our systems support police forces and traffic control by identifying all major drugs. Suspicion of drug-abuse can be proved quickly and reliably, with rapid tests that can be administered non-invasively using either saliva or sweat. To secure legal evidence a subsequent laboratory blood test can be taken.

Securetec's tests are fast, efficient, reliable and easy to use, both at the roadside and in the police station, helping to reduce the number of accidents on our roads.

Drug Enforcement: even the smallest trace can be important

In the fight against drug trafficking and drug-related crime, police authorities around the world need the most modern technologies. Surface drug residues which are often invisible to the human eye have to be reliably detected within minutes. Individuals have to be tested for drug-abuse – preferably with little or no human contact.

Securetec's state-of-the-art antibody test systems help the drug enforcer to detect drug residues in underco-

ver investigations. There is no need for complex and time-consuming laboratory tests. Within minutes, authorities can make decisions based on accurate results – even under adverse conditions in the field.

By developing highly specific antibody drug tests, Securetec provides an important tool for the difficult and demanding work of drug enforcers worldwide.

Protecting our borders

With the increase in cross-border trade in modern economies, customs and border control authorities face an important challenge: how to prevent illegal exports and imports without significantly slowing down cross-border traffic or increasing the cost of trade. An exceptionally difficult task when it comes to the illegal trade in drugs, tobacco and explosives.

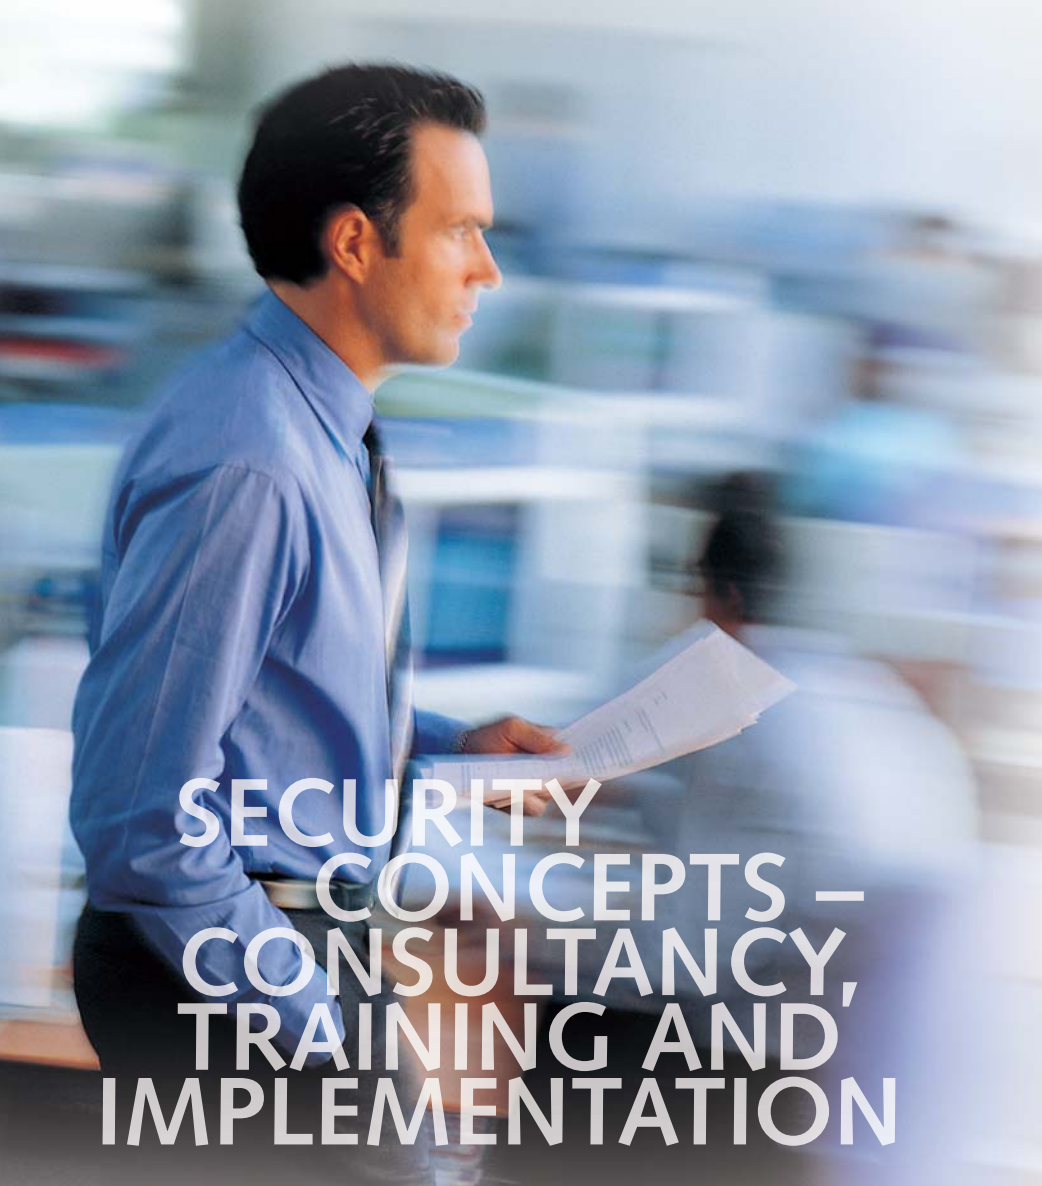

In collaboration with customs authorities, Securetec has developed mobile systems that are able to reliably detect even the smallest traces of illicit substances. Rapid tests can be administered to individuals and their luggage - thus providing legal evidence by positively linking a person and their means of concealing drugs or illegal substances.

DRUG ENFORCEMENT, CUSTOMS AND BORDER CONTROL

Our target: the development of detection systems that enable authorities to improve security for individuals, communities and economies.

SECURITY CONCEPTS – CONSULTANCY, TRAINING AND IMPLEMENTATION

For private and public sector organisations

To solve problems – not to ignore them

Drug usage today is widespread – irrespective of age group and social background. In some countries, already one out of every five citizens uses drugs, and this trend is on the increase. They can be men or women, young or old, trainees or managers.

Anyone who ignores drug abuse, and the related risks, also becomes part of the problem. Securetec supports companies, schools and educational institutions to actively fight the campaign against drugs.

Security in schools and educational institutions

Drugs have reached schools across all age groups and communities, and although it is of paramount importance, the use of drug prevention programs is still in its infancy. Pupils are unaware of the far-reaching dangers of traditional and in particular so-called "party" drugs. Drugs can reduce the ability to perform, endanger health and lead to long-term isolation.

To achieve a better future for our children, Securetec helps parents, teachers and pupils by providing consultancy, offering information and developing effective drug prevention programs. Rapid tests show evidence of drug residue and drug consumption – professionally and confidentially. The positive detection of drugs in schools can demonstrate the need for a prevention program and rapid testing can verify the efficiency of drug education programs.

BUILDING AND MAINTAINING CONFIDENCE

Measuring rehabilitation progress

In any professional rehabilitation program it is important to quantify and measure progress. Rapid drug tests are a valuable tool that drug consultants, probation officers and prison medical staff can employ to ensure that their work is successful. The patient can share in this success, as systematic testing builds and maintains confidence. Even in the event of relapse, our tests can provide valuable information quickly so that treatment can be adjusted accordingly.

Rapid drug detection in medical emergencies

In emergency rooms and paramedic vehicles, fast and reliable diagnostics can literally mean the difference between life and death. If traditional urine tests cannot be administered, our rapid drug tests for saliva and sweat allow doctors to quickly determine if symptoms are related to drug-abuse – important decision-making information.

Solutions for a drug-free workplace

Individuals who use drugs exhibit reduced concentration levels and reaction speeds – often for hours or even days. In many professional areas the use of traditional or modern, recreational drugs can endanger security and health - not only for the user, but for their colleagues and customers as well. In every case, the use of drugs reduces efficiency and productivity.

By ignoring drug abuse, managers and company physicians can be in violation of their fiduciary duties and

held responsible for accidents caused by drugs. Pre-employment medical tests are not sufficient; companies need to maintain an ongoing program of effective drug screening among employees. Securetec offers expert consultancy, based on many years' experience in detection, prevention and workplace security, to develop tailored drug prevention programs.
